DATA SHEET

opTREND FOR NMIS

Predictive Trend Analysis

IDENTIFY ABNORMAL BEHAVIOUR

Identify resources which are behaving abnormally, based on previous behavior. Providing true trend analysis of critical resources where static thresholds are too hard to maintain.

PREDICTIVE ANALYTICS

Predict future organizational requirements and network trends through trending dashboards that help to pinpoint new patterns as they begin occurring.

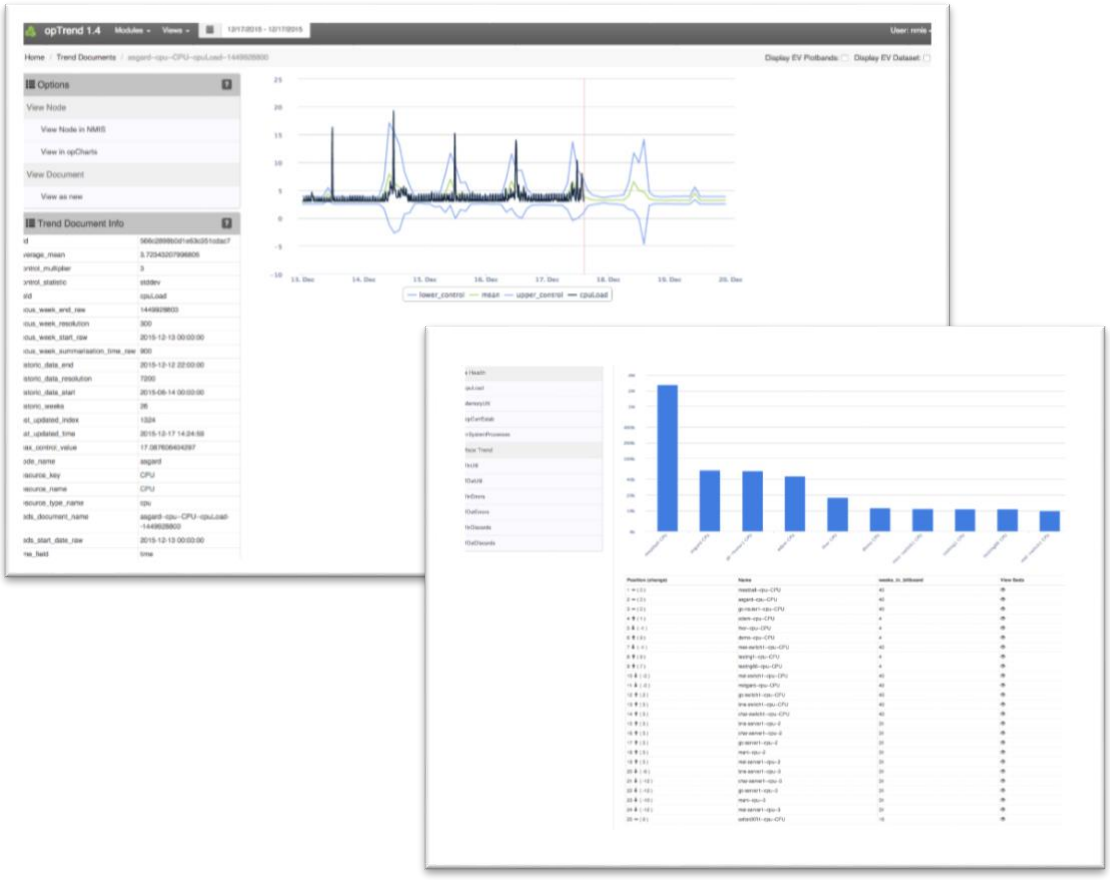
EFFECTIVE RESOURCE PLANNING

Streamline budgeting, planning and the implementation of upgrades with new insight into network usage patterns and changes.

INCREASED SERVICE PERFORMANCE

Improve and optimise service delivery using trend data and event triggers to alert staff when a performance issue is at risk of occurring.

ENQUIRE NOW



Proactively manage network resources using opTrend to visually analyze key performance metrics and monitor gradual increases in traffic and data usage to identify where issues and resource exhaustion are likely to occur and when.

opTrend will automatically baseline key performance metrics and highlight resources with exceptions. It can also identify and highlight key resources that are performing at a high level.

Trend data is used to create actionable activities from identification of resource exhaustion, helping you to rectify performance issues before they occur.
