

Open-Audit

Network Discovery and Inventory Software

Discover what is on your network today! - Save yourself time, money and effort with Open-Audit. A smooth front-end, business-focused reporting and comprehensive discovery for more devices, Open-Audit is the only tool you'll want to audit your network. Using an agentless framework, Open-Audit will audit your network, on your schedule, with no impact to user experience. The device discovery engine scans your provided network and intelligently stores the configurations of every discovered component giving you information such as hardware information, software licensing, configuration changes, non-authorized devices, capacity utilization, and hardware warranty status. Integration with NMIS is an easy 3 step process, so gathering device information alongside performance statics and configuration data has never been more straightforward.

Discover Every Device

Easily create network discovery profiles and then run a discovery with a single click or even automated.

Configuration Change Management

Track and report on IT asset configuration changes as well as software licensing, shadow IT and hardware warranty status.

Scheduled Reporting

Using the scheduler will give you the results by email, JSON, CSV, XML or HTML.

Controlled Role Based Access

Open-Audit's user roles have a set of permissions (Create, Read, Update, Delete) for each endpoint. Roles can also be used with LDAP (Active Directory and OpenLDAP) authorisation.

Configuration Baselines

The compliance system compares software, hardware, users and netstat data against your required standard.

Software Licensing

Get definitive lists of all of your software licensing alongside your asset management. Get historical snapshots for easy comparison

PRICING AND PURCHASING

- Licensed by the device and not by the quantity of discoveries/audits.
- Fixed license costs
- MSP Scale licensing available.
- Unlimited user accounts.

SALES AND SUPPORT

- Easy to purchase, contact us.
- Support portal access.
- Complete documentation and support wiki.
- Pay as you grow options are available.

FLEXIBLE LICENSING

- Open-Audit is licensed by the device count.
- There are no limits on the number of discoveries or audits.
- Subscription Licensing available.
- Highly scalable architecture.

Ease of Use:

EASY IMPLEMENTATION

- Easy installation.
- Dependencies are installed automatically.
- Support available for install and customization.
- CSV import and script ready.

ACCESSIBILITY

- Extensive Role-Based Access control mechanisms.
- Accessible from any device.
- Single Sign On across all our applications.
- RESTful JSON API & standard CRUD functionality.

EASY TO USE INTERFACE

- The Open-Audit home dashboard is ready to go with information.
- Run discoveries/audits on demand or look at historical reports.
- Accessible from any common browser.

Network Device Discovery & Audit:

LOCATION MANAGEMENT

- With Open-Audit you have the ability to build locations and have devices assigned to a location.
- By adding an address to a location, you can visualize where your assets are on a map.
- If your organization utilizes racks, Open-Audit comes with rack management, you can even get a visual of your rack.
- Discover your cloud instances and know where your data is being stored.
- Open-Audit uses Organizations to split out assets, if you are a service provider it is built to manage your customer's equipment.

DEVICE DISCOVERY

- Discover all networked devices.
- Discover every server.
- Cloud instances on AWS, Azure and Google Compute.
- Virtual Machines.
- Even store non connected devices.

DEVICE AUDITING

- Open-Audit will discover everything about your devices and build a comprehensive audit profile for them.
- Hardware auditing on machines, such as motherboards, processors, disks or memory.
- Software auditing including installed software running, services and file auditing.
- Network auditing including network cards, IP, open ports and routes.
- Full system details are audited.
- Users and user groups are available for auditing.

IT ASSET MANAGEMENT

- Gives you detailed inventory of your organization's hardware, software and network assets.
- Open-Audit provides information that help cut software licensing and support costs.
- Improves your visibility and control of IT assets.
- Inventory and configuration data can help with recovery from disaster or other unexpected events.

REPORTING

- All reports that are generated can be scheduled and emailed when it is suitable for you.
